Foreword	xv
Preface	xvii
Acknowledgments	xxi
CHAPTER 1 ■ Introduction	1
1.1 WIND ENERGY BACKGROUND	2
1.2 ORGANIZATION OF THIS BOOK	6
1.2.1 Who Should Use This Book	8
1.2.2 Note for Instructors	9
1.2.3 Datasets Used in the Book	9
PART I Wind Field Analysis	
CHAPTER 2 ■ A Single Time Series Model	17
2.1 TIME SCALE IN SHORT-TERM FORECASTING	18
2.2 SIMPLE FORECASTING MODELS	19
2.2.1 Forecasting Based on Persistence Model	19
2.2.2 Weibull Distribution	19
2.2.3 Estimation of Parameters in Weibull Distribution	20
2.2.4 Goodness of Fit	21
2.2.5 Forecasting Based on Weibull Distribution	23
2.3 DATA TRANSFORMATION AND STANDARDIZATION	24
2.4 AUTOREGRESSIVE MOVING AVERAGE MODELS	27
2.4.1 Parameter Estimation	28
2.4.2 Decide Model Order	29
2.4.3 Model Diagnostics	31

viii ■ Contents

2.4.4	Forecasting Based on ARMA Model	34
2.5	OTHER METHODS	38
2.5.1	Kalman Filter	38
2.5.2	Support Vector Machine	40
2.5.3	Artificial Neural Network	45
2.6	PERFORMANCE METRICS	48
2.7	COMPARING WIND FORECASTING METHODS	50
CHAPTER	3 ■ Spatio-temporal Models	57
3.1	COVARIANCE FUNCTIONS AND KRIGING	57
3.1.1	Properties of Covariance Functions	58
3.1.2	Power Exponential Covariance Function	59
3.1.3	Kriging	60
3.2	SPATIO-TEMPORAL AUTOREGRESSIVE MODELS	65
3.2.1	Gaussian Spatio-temporal Autoregressive Model	65
3.2.2	Informative Neighborhood	68
3.2.3	Forecasting and Comparison	69
3.3	SPATIO-TEMPORAL ASYMMETRY AND SEPARABILITY	73
3.3.1	Definition and Quantification	73
3.3.2	Asymmetry of Local Wind Field	74
3.3.3	Asymmetry Quantification	76
3.3.4	Asymmetry and Wake Effect	78
3.4	ASYMMETRIC SPATIO-TEMPORAL MODELS	79
3.4.1	Asymmetric Non-separable Spatio-temporal Model	79
3.4.2	Separable Spatio-temporal Models	81
3.4.3	Forecasting Using Spatio-temporal Model	81
3.4.4	Hybrid of Asymmetric Model and SVM	83
3.5	CASE STUDY	83
CHAPTER	4 ■ Regime-switching Methods for Forecasting	93
4.1	REGIME-SWITCHING AUTOREGRESSIVE MODEL	93
4.1.1	Physically Motivated Regime Definition	94
4.1.2	Data-driven Regime Determination	96
4.1.3	Smooth Transition between Regimes	97

4.1.4	Markov Switching between Regimes	98
4.2	REGIME-SWITCHING SPACE-TIME MODEL	99
4.3	CALIBRATION IN REGIME-SWITCHING METHOD	104
4.3.1	Observed Regime Changes	105
4.3.2	Unobserved Regime Changes	106
4.3.3	Framework of Calibrated Regime-switching	107
4.3.4	Implementation Procedure	111
4.4	CASE STUDY	113
4.4.1	Modeling Choices and Practical Considerations	113
4.4.2	Forecasting Results	115
PART II Wind Turbine Performance Analysis		
CHAPTER	5 ■ Power Curve Modeling and Analysis	125
<hr/>		
5.1	IEC BINNING: SINGLE-DIMENSIONAL POWER CURVE	126
5.2	KERNEL-BASED MULTI-DIMENSIONAL POWER CURVE	127
5.2.1	Need for Nonparametric Modeling Approach	128
5.2.2	Kernel Regression and Kernel Density Estimation	131
5.2.3	Additive Multiplicative Kernel Model	134
5.2.4	Bandwidth Selection	136
5.3	OTHER DATA SCIENCE METHODS	137
5.3.1	k -Nearest Neighborhood Regression	138
5.3.2	Tree-based Regression	139
5.3.3	Spline-based Regression	143
5.4	CASE STUDY	145
5.4.1	Model Parameter Estimation	145
5.4.2	Important Environmental Factors Affecting Power Output	147
5.4.3	Estimation Accuracy of Different Models	150
CHAPTER	6 ■ Production Efficiency Analysis and Power Curve	159
<hr/>		
6.1	THREE EFFICIENCY METRICS	159
6.1.1	Availability	160
6.1.2	Power Generation Ratio	160
6.1.3	Power Coefficient	161

x ■ Contents

6.2	COMPARISON OF EFFICIENCY METRICS	162
6.2.1	Distributions	164
6.2.2	Pairwise Differences	166
6.2.3	Correlations and Linear Relationships	168
6.2.4	Overall Insight	170
6.3	A SHAPE-CONSTRAINED POWER CURVE MODEL	171
6.3.1	Background of Production Economics	172
6.3.2	Average Performance Curve	174
6.3.3	Production Frontier Function and Efficiency Metric	177
6.4	CASE STUDY	179
CHAPTER	7 ■ Quantification of Turbine Upgrade	187
7.1	PASSIVE DEVICE INSTALLATION UPGRADE	187
7.2	COVARIATE MATCHING-BASED APPROACH	189
7.2.1	Hierarchical Subgrouping	189
7.2.2	One-to-One Matching	192
7.2.3	Diagnostics	193
7.2.4	Paired <i>t</i> -tests and Upgrade Quantification	194
7.2.5	Sensitivity Analysis	196
7.3	POWER CURVE-BASED APPROACH	197
7.3.1	The Kernel Plus Method	198
7.3.2	Kernel Plus Quantification Procedure	201
7.3.3	Upgrade Detection	202
7.3.4	Upgrade Quantification	204
7.4	AN ACADEMIA-INDUSTRY CASE STUDY	204
7.4.1	The Power-vs-Power Method	206
7.4.2	Joint Case Study	208
7.4.3	Discussion	211
7.5	COMPLEXITIES IN UPGRADE QUANTIFICATION	213
CHAPTER	8 ■ Wake Effect Analysis	219
8.1	CHARACTERISTICS OF WAKE EFFECT	219
8.2	JENSEN'S MODEL	220

8.3	A DATA BINNING APPROACH	222
8.4	SPLINE-BASED SINGLE-WAKE MODEL	223
8.4.1	Baseline Power Production Model	224
8.4.2	Power Difference Model for Two Turbines	224
8.4.3	Spline Model with Non-negativity Constraint	226
8.5	GAUSSIAN MARKOV RANDOM FIELD MODEL	230
8.6	CASE STUDY	232
8.6.1	Performance Comparison of Wake Models	232
8.6.2	Analysis of Turbine Wake Effect	235

PART III Wind Turbine Reliability Management

CHAPTER	9 ■ Overview of Wind Turbine Maintenance Optimization	247
---------	---	-----

9.1	COST-EFFECTIVE MAINTENANCE	248
9.2	UNIQUE CHALLENGES IN TURBINE MAINTENANCE	249
9.3	COMMON PRACTICES	251
9.3.1	Failure Statistics-Based Approaches	251
9.3.2	Physical Load-Based Reliability Analysis	252
9.3.3	Condition-Based Monitoring or Maintenance	252
9.4	DYNAMIC TURBINE MAINTENANCE OPTIMIZATION	252
9.4.1	Partially Observable Markov Decision Process	254
9.4.2	Maintenance Optimization Solutions	256
9.4.3	Integration of Optimization and Simulation	260
9.5	DISCUSSION	263

CHAPTER	10 ■ Extreme Load Analysis	267
---------	----------------------------	-----

10.1	FORMULATION FOR EXTREME LOAD ANALYSIS	267
10.2	GENERALIZED EXTREME VALUE DISTRIBUTIONS	270
10.3	BINNING METHOD FOR NONSTATIONARY GEV DISTRIBUTION	272
10.4	BAYESIAN SPLINE-BASED GEV MODEL	277
10.4.1	Conditional Load Model	277
10.4.2	Posterior Distribution of Parameters	280
10.4.3	Wind Characteristics Model	282

xii ■ Contents

10.4.4	Posterior Predictive Distribution	284
10.5	ALGORITHMS USED IN BAYESIAN INFERENCE	285
10.6	CASE STUDY	285
10.6.1	Selection of Wind Speed Model	285
10.6.2	Pointwise Credible Intervals	285
10.6.3	Binning versus Spline Methods	289
10.6.4	Estimation of Extreme Load	293
10.6.5	Simulation of Extreme Load	294
CHAPTER 11 ■ Computer Simulator-Based Load Analysis		301
<hr/>		
11.1	TURBINE LOAD COMPUTER SIMULATION	302
11.1.1	NREL Simulators	302
11.1.2	Deterministic and Stochastic Simulators	302
11.1.3	Simulator versus Emulator	304
11.2	IMPORTANCE SAMPLING	306
11.2.1	Random Sampling for Reliability Analysis	306
11.2.2	Importance Sampling Using Deterministic Simulator	307
11.3	IMPORTANCE SAMPLING USING STOCHASTIC SIMULATORS	311
11.3.1	Stochastic Importance Sampling Method 1	312
11.3.2	Stochastic Importance Sampling Method 2	314
11.3.3	Benchmark Importance Sampling Method	314
11.4	IMPLEMENTING STOCHASTIC IMPORTANCE SAMPLING	315
11.4.1	Modeling the Conditional POE	315
11.4.2	Sampling from Importance Sampling Densities	316
11.4.3	The Algorithm	317
11.5	CASE STUDY	319
11.5.1	Numerical Analysis	319
11.5.2	NREL Simulator Analysis	323
CHAPTER 12 ■ Anomaly Detection and Fault Diagnosis		331
<hr/>		
12.1	BASICS OF ANOMALY DETECTION	331
12.1.1	Types of Anomalies	331
12.1.2	Categories of Anomaly Detection Approaches	333

12.1.3	Performance Metrics and Decision Process	335
12.2	BASICS OF FAULT DIAGNOSIS	336
12.2.1	Tree-Based Diagnosis	337
12.2.2	Signature-Based Diagnosis	338
12.3	SIMILARITY METRICS	340
12.3.1	Norm and Distance Metrics	341
12.3.2	Inner Product and Angle-Based Metrics	342
12.3.3	Statistical Distance	344
12.3.4	Geodesic Distance	345
12.4	DISTANCE-BASED METHODS	347
12.4.1	Nearest Neighborhood-based Method	347
12.4.2	Local Outlier Factor	347
12.4.3	Connectivity-based Outlier Factor	348
12.4.4	Subspace Outlying Degree	349
12.5	GEODESIC DISTANCE-BASED METHOD	351
12.5.1	Graph Model of Data	351
12.5.2	MST Score	352
12.5.3	Determine Neighborhood Size	355
12.6	CASE STUDY	355
12.6.1	Benchmark Cases	355
12.6.2	Hydropower Plant Case	360
	Bibliography	367
	Index	387
